salwa-developer-portfolio.vercel.app | linkedin.com/in/salwa-k-66b1b5242 | github.com/salwa010

Frontend Developer specialising in **Angular**, with hands-on experience in React.js and Node.js. Built and shipped production web applications across Accounting, Inventory Management, CRM, and E-commerce domains. Known for delivering performant, reusable component-driven UIs and integrating complex APIs on schedule. Promoted from intern to Level 2 Engineer in under 7 months. Based in Dubai on a **Visit Visa — immediately available**.

SKILLS SUMMARY

- **Languages:** JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS
- **Frameworks:** Angular (v14, v15, v16+), RxJS, React.js, Node.js
- **Testing:** Jasmine, Karma
- **Tools:** Git, Angular Material, Bootstrap, npm, Figma, Adobe XD, Azure DevOps, Postman
- **Databases & APIs:** MySQL, REST APIs
- **Methodologies:** Agile / Scrum — Sprint Planning, Code Reviews, Cross-functional Delivery
- **Soft Skills:** Fast Learner, Clear Communicator, Promoted Ahead of Peers, Dubai-based & Immediately Available

WORK EXPERIENCE

Product Engineer (Frontend) - Level 2, Gritstone Technologies, Calicut Jul 2023 - Nov 2025

- Architected and shipped Angular applications across **4 industry verticals** (Accounting, Inventory, CRM, E-commerce), each delivered on sprint schedule with **zero critical post-release defects**.
- Built a shared UI component library (tables, modals, form controls, loaders) adopted across **3 product modules** — cutting per-feature development time by **~30%** and enforcing visual consistency platform-wide.
- Profiled and refactored Angular components using lazy loading, OnPush change detection, and bundle optimisation — achieving a **34% rendering performance improvement** on the live accounting platform.
- Drove on-time feature delivery within Agile sprints, contributing to a **10% improvement in sprint completion rate** over two consecutive quarters through proactive code reviews and early escalation.
- Integrated and stabilised **15+ REST API endpoints** with full error-boundary handling, cutting client-reported data-entry errors in critical workflows by 15%.
- Implemented SEO best practices across Angular applications — semantic HTML5, meta tags, and lazy loading — achieving measurable Lighthouse performance improvements.

Frontend Developer Intern, Gritstone Technologies, Calicut Dec 2022 - Jun 2023

- Converted to full-time Level 2 Engineer before internship ended — a recognition extended to **fewer than 1 in 3 interns** — on the strength of Angular module delivery and code quality.
- Refactored build tooling and front-end workflows, contributing to a team-wide **30% reduction in project delivery time** and faster CI/CD deployment cycles.
- Debugged and stabilised **3 core Angular modules** with backend and QA teams, improving system stability and product accuracy by 15% within the first quarter.
- Participated in cross-functional collaboration with designers, backend engineers, and QA — increasing project delivery efficiency by 10%.

PROJECTS

Metlone - Accounting & Inventory Software [Link](#)

- Sole frontend owner of the accounting module; designed and built the Angular UI that streamlined navigation and improved user engagement from day one of go-live.
- Engineered reactive form validation rules — directly reducing rework for the finance team.
- Created 8+ reusable shared components (tables, modals, form controls, loaders) adopted across multiple modules, reducing duplicated development effort across products.
- Optimised page load and UI responsiveness for finance and warehouse teams, delivering a noticeably faster experience confirmed in client UAT.

Asseto - Asset Management Software [Link](#)

- Built a real-time dashboard with live asset quantity and value graphs, replacing manual reporting and giving operations teams instant visibility into asset status.
- Implemented CSS and JavaScript animations across key interaction touchpoints, improving the overall feel and responsiveness of the interface.
- Delivered fully responsive layouts across all breakpoints (mobile, tablet, desktop) with zero layout failures in QA sign-off.

Ecommerce Software

- Developed product listing, cart, checkout, and user dashboard in Angular with role-based access control serving 3 distinct user types from a single codebase.
- Added client-side search, filtering, and form validation — reducing input-related support issues caught in pre-launch QA.
- Partnered with backend and design teams to refine UI behaviour and ship all features on time across every sprint.
